

NOTES:

1. Typically, the 2:1 slope will begin at the shoulder break.
2. The B borrow quantities are determined to a point 0.6m above the ground water elevation.
3. Do not show the dashed lines illustrated above to determine B borrow quantities on the cross section.
4. Temporary right-of-way for peat disposal will typically be established equally on either side of the roadway.

PEAT EXCAVATION, BACKFILL AND DISPOSAL
